**MediVoice® Partners with VisionTree® to Integrate its Voice-Activated e-Prescribing Solution into VisionTree's VTOC™ Web-Based Patient Management System**

**WHITE PLAINS, NY - July 24, 2008** - MediVoice®, LLC, the world's first mobile voice-activation solution for e-Health and e-Prescribing, has formed a strategic partnership with VisionTree®, a leading provider of interactive, web-based, patient-centered health record management and provider communication systems to integrate and market its mobile voice-activation solution with the VisionTree Optimal Care™ (VTOC) system.

"MediVoice is pleased to develop a strategic partnership with VisionTree. We are impressed with their web-based technology and the value it brings to physicians and patients," said Anthony Milone, MediVoice, LLC, Board Member and Managing Director.

VisionTree customers will be able to utilize MediVoice's software platform to access the SureScripts® network for e-Prescribing and e-Health management. MediVoice provides the world's first commercially available mobile voice-activated e-healthcare solution. MediVoice utilizes the most innovative technology in speech solutions. It allows healthcare professionals to voice-activate electronic prescriptions, electronic medical records, and a wide variety of e-health services. The use of e-Prescribing has been shown to reduce medical errors, reduce medical and administrative costs, and improve the efficiency and documentation of the medication prescription process.

Martin Pellinat, CEO of VisionTree Software, said "The VisionTree Optimal Care™ (VTOC) platform is used by over 70 leading academic and community sites around the country for web-based patient communication and data management. With the ability for physicians to launch a voice-activated e-Prescribing solution, we have expanded the VTOC patient management system to not only include the patient's health record, e-communication and disease management, but also include the ability for physicians to deliver the highest level of efficiency and quality care to their patients."

Ed Zecchini, COO & CTO of MediVoice adds, "The ease of use of a voice solution will be the driving force for rapid deployment, adoption and utilization of the VisionTree Optimal Care™ system and MediVoice's electronic prescriber."

"VTOC helps both healthcare consumers and providers," said Martin Pellinat, CEO of VisionTree. "The system empowers patients to provide important feedback directly with their physician electronically, as well as build their own personal health record to help make the best decisions at the most critical times. VTOC will also serve as the vehicle to transform the medical industry into a true paperless environment, increasing staff's productivity and data gathering capabilities to effectively measure patient satisfaction. With more than 100,000 users, VTOC is improving the way healthcare is offered."
